

**Standard Mountings**

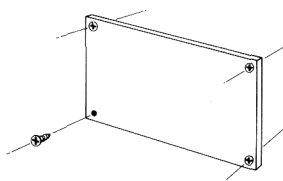

The standard mounting details are illustrated below. Select the mounting detail you desire and include the code number on your order.

Special mounting details can be worked out at additional cost on request for special requirements not covered by the standard mounting details.

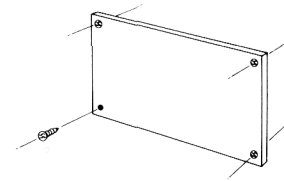

The size and shape of your sign will determine the number of fasteners, amount of adhesive, etc. required for proper durability of the mounting type you select. (For example, a long and narrow sign panel might use only 2 drilled fasteners for mounting, whereas a square sign panel might use 4 drilled fasteners.)

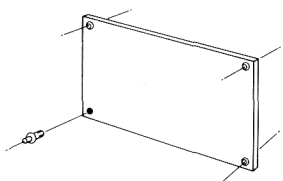

**35**—Drilled, with Standard Screws

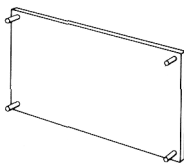

**36**—Drilled, with Countersunk Phillips Screws
